**Features:**

- Each book deals with a **behavioral topic** in ways **relevant to young children**
- **Delightful, contemporary illustrations** will captivate young readers
- **Positive, uplifting story** helps children to become aware of the consequences of negative behavior and to initiate change
- A spread of **information for parents** at the back of the book includes questions to ask children to engage them more deeply on the topic
- **Reviewed by a child psychotherapist** to ensure appropriateness for the age group

Explore appropriate behaviors with the children from Miss Clayton's class! What does it mean to be kind, to share, to stay calm and to use teamwork? With stories written in clear, simple text, and with Stuart Lynch's charming illustrations, these books will keep children engaged and entertained. Each book features a spread of information for parents and educators, which provides an opportunity to build on the issues presented in the book.

# A True Book™

## Previously Published Subsets

“In only 48 pages, and with a large, easy-to-read typeface, this entry in the new A True Book: Why It Matters series (6 titles) does a fine job of explaining how the court works, what kinds of cases it takes, and how justices are chosen and what they do. This also has a look at some topics not often covered (e.g., whether there should be cameras in the court) and brings relevance to readers by highlighting several cases that impacted young people, including those on censorship or students with disabilities. To its credit, the book also makes a point of noting that, of the court’s 114 justices, 108 have been white men. **The open format with plenty of color photographs makes this an excellent choice for students and may pick up a few browsers.**”

# A True Book™ — Our Universe

**Release Date: August 17, 2020**

**Pub Date: September 1, 2020**

\$31.00 (Reinforced Library Binding)

Grade Range: 3–5

Age Range: 8–10

48 pages, full-color photographs, illustrations, maps

Trim: 7 1/4 x 8 3/8

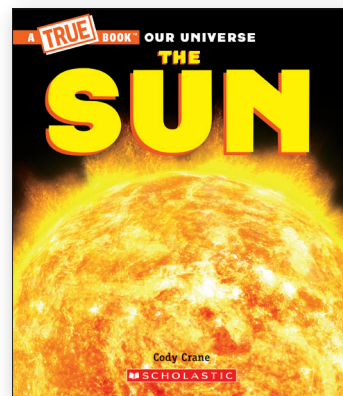

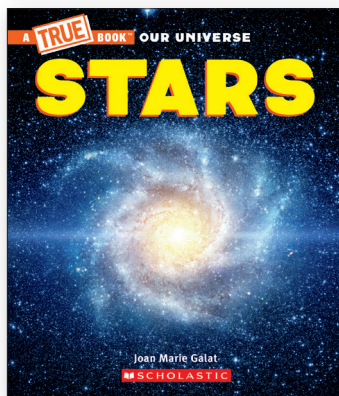

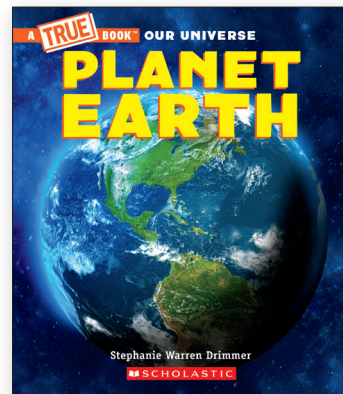

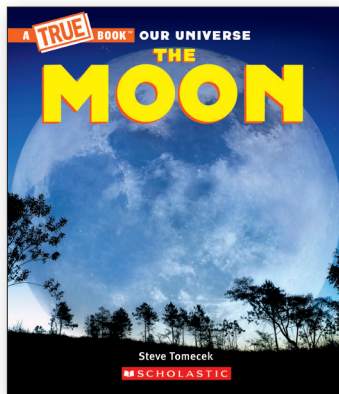

Copyright 2021 / Children's Press®

*Previously Published: 210 titles in 35 subsets*

### Features:

- This series covers **Next Generation Science Standards** core ideas including “The Universe and its stars” and “Earth and the solar system.”
- Includes **new NASA imagery** and the **latest space discoveries**
- **Find the Truth!** feature starts each book with two statements—one true and one false—which begins the inquiry process by engaging readers to think proactively
- An **introductory spread** provides an important overview of the information to be presented, always linking the global theme of the series, *Our Universe*, to the subject matter.
- **Stunning photography** accompanies the text, bringing information to life.
- **Fascinating sidebars** highlight important concepts, moments, and ideas
- **The Big Truth** pages bring to light an interesting and sometimes controversial topic about space and encourage readers to dig deeper, think critically, and learn more.
- **Think Like A Scientist** features encourage readers to analyze information the way a real scientist would!
- An **activity** at the end of the book encourages readers to apply their knowledge in an engaging hands-on way, bringing the science to life

Planets and stars, moons and galaxies! The universe is a vast and mysterious place with much to explore. And there’s no better way to make amazing discoveries about space than with this reimagined series. With the latest NASA imagery and lively text, the titles in *Our Universe* bring the awe of the cosmos directly to readers. Students will come away with a wealth of knowledge about the incredible celestial bodies in our universe.

# A True Book™

## Previously Published Subsets

“Don’t be fooled the title. Rather than compiling bizarre plant life, this book in the True Book: Incredible Plants! series (6 titles) is actually a concise overview of the plant kingdom’s history and primary plant types. It begins with the theory that ancient algae (a protist) gave rise to modern plants, which have evolved unique characteristics to adapt to different environments and to reproduce. Seedless (e.g. mosses and ferns) and flowering plants are aptly differentiated, and trees receive an entire chapter explicating their deciduous and evergreen varieties. Fascinating facts abound, often in captions; pollination is fruitfully discussed; and plant posers are unmasked—get out of here, mushrooms! **Vibrant photos and diagrams provide excellent support for the text, and a final activity on color-change in leaves adds a hands-on learning opportunity.**”

# How would you Survive?

# How Would You Survive?™

**Release Date: November 16, 2020**

**Pub Date: December 1, 2020**

\$29.00 (Reinforced Library Binding)

Grade Range: 3–up

Age Range: 8–up

32 pages, full-color illustrations

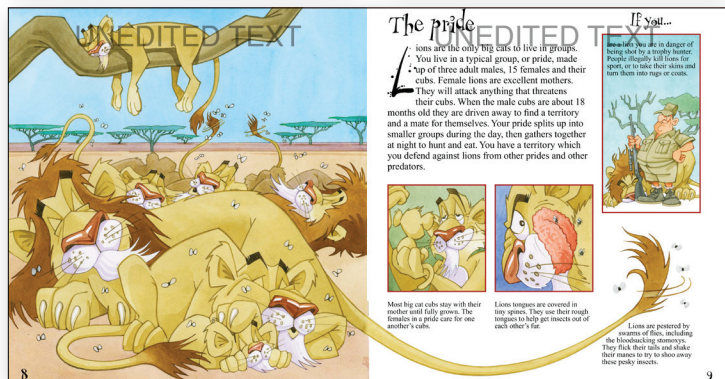

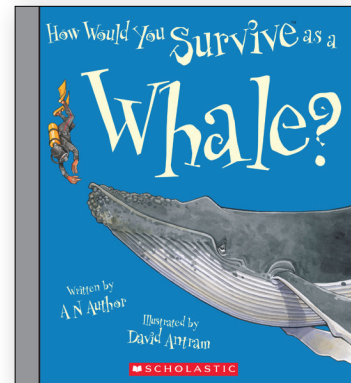

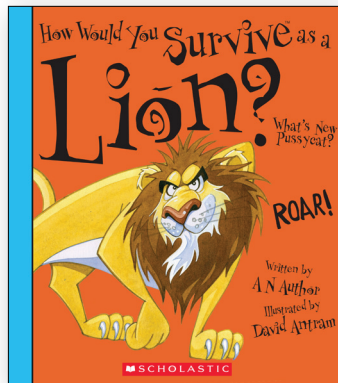

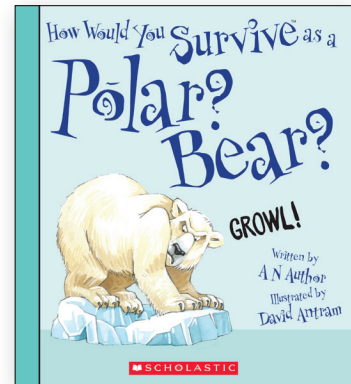

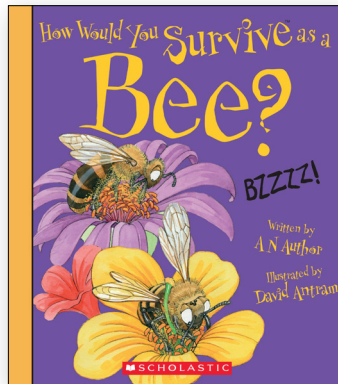

Trim: 8 3/8 x 9 7/16

Copyright 2021 / Franklin Watts®

**Features:**

- Animals and their ecosystems are a key component of the **Next Generation Science Standards**
- Educates readers about the **behavior of different animal species** in an exciting and immersive manner
- Encourages **empathy and concern for other species and ecosystems**
- **Quirky, humorous and irreverent** approach to a nonfiction topic
- **Anthropomorphized animals** add character and expression
- Covers key aspects of the **life cycle** of each species
- **Table of contents, glossary, index**

With the same quirky, humorous and irreverent approach to nonfiction as *You Wouldn't Want to Be/You Wouldn't Want to Live Without*, each book in this new series features an animal species picked either for its ubiquitous nature or for its level of endangerment. The books describe key aspects of the life cycle of each animal such as diet, reproduction and habitat. Illustrated with original art that will feature anthropomorphized animals to add character and expression, this series will provide really engaging content to young readers!

High-interest topics, real stories, engaging design and astonishing photos are the building blocks of the XBooks, a new series of books designed to engage and motivate reluctant and enthusiastic readers alike. How can DNA help a convicted person prove their innocence? How did a burglar steal from a store without leaving any fingerprints? Why was the tiny town in Hardin, Missouri, awash with skeletons after a huge flood? With topics based in science, these action-packed books will help students unlock the power and pleasure of reading... and always ask for more!

Fingerprint Processing 101		IN DEPTH	
Fingerprints can be found on different types of surfaces. So specialists use different methods to process them.			
Kind of Fingerprint	Can You See Them?	Description	How They're Processed
Patent prints	These prints are clearly visible.	These prints are made by touching something like paint or blood and then touching other surfaces.	Patent prints are photographed.
Latent prints on hard surfaces	These prints are usually invisible to the naked eye.	These prints are formed by touching hard surfaces such as glass, plastic, or metal. The oil or sweat from the skin leaves a print.	Super Glue fuming, lasers, and dusting can detect latent prints on hard surfaces. For Super Glue fuming, an object that might have a print is put in a small chamber. Fumes from heated Super Glue are released into the chamber. A chemical in the fumes sticks to the oil and traces of sweat. When the fumes dry, the fingerprint becomes easier to see.
Latent prints on soft surfaces	These prints are mostly invisible to the naked eye.	These prints are formed by touching soft or absorbent surfaces such as paper, cardboard, or unfinished wood.	Latent prints on soft surfaces can be detected with a chemical called Ninhydrin. Ninhydrin turns dark blue or purple when it comes in contact with traces of sweat from fingerprints.
Impressed prints	These prints are visible.	These prints are made by touching something like gum that leaves a clear impression of the prints.	Impressed prints are photographed. And investigators can sometimes make a mold of them.
Partial prints	These prints are sometimes visible. It depends on whether they are patent, impressed, or latent.	Partials are incomplete prints. They can be patent, latent, or impressed prints.	Software called "recognition technology" can read some partial prints. It can make identifications from incomplete data.
